

ZZ PLANT

OVERVIEW

Zamioculcas zamiifolia, also known as the ZZ Plant, is a popular indoor plant for its hardiness and low water needs. It is a stemless evergreen plant that typically grows to 3' tall with compound leaves rising up from its rhizomes.

WATER

Water once every 2-3 weeks, allowing the soil to dry out between waterings. If it's situated in brighter light, it will need water sooner than when it's in a darker spot.

LIGHT

Medium light to bright light will benefit your ZZ, but it is one of the few plants that can tolerate low light.

SOIL

We recommend a cactus or succulent potting mix, but an indoor potting soil will suffice as well!
